

# CBD interactions

## WHAT YOU NEED TO KNOW

### Increased sleepiness

Anything you take that makes you feel sedated or sleepy may produce even more sleepiness if you take it with CBD. Be cautious of using CBD with any substance that makes you sleepy or feel sedated, even if it's not listed below.

**Opioids:** oxycodone, hydrocodone, percocet, percodan, fentanyl, morphine, codeine, methadone, tramadol, buprenorphine.

**Benzodiazepines:** alprozolam, lorazepam, triazolam, clonazepam, estazolam, flurazepam, temazepam, midazolam, chlordiazepoxide, clorazepate, diazepam, halazepam.

**Antipsychotics:** haloperidol, loxapine, thioridazine, molindone, thiothixene, fluphenazine, mesoridazine, trifluoperazine, perphenazine, chlorpromazine, aripiprazole, clozapine, ziprasidone, risperidone, quetiapine, olanzapine.

**Sedating antihistamines:** alimemazine, chlorphenamine, clemastine, cyproheptadine, hydroxyzine, ketotifen, promethazine, diphenhydramine

Also consider the effects of: **alcohol, kava, melatonin.**

### May change drug metabolism

Many drugs are broken down by enzymes in the liver, and CBD may compete for or interfere with these enzymes, leading more or less of the drug in your body. This altered concentration may lead to the medication not working, or an increased risk of side effects. If you are using one of these medications, work with your doctor to make sure your CBD isn't impacting your other medicine(s).

#### Which medications?

acenocoumarol, alfentanil, aminophylline, amiodarone, amitriptyline, amphotericin, argatroban, busulfan, carbamazepine, clindamycin, clomipramine, clonidine, clorindion, cyclobenzaprine, cyclosporine, dabigatran etexilate, desipramine, dicoumarol, digitoxin, dihydroergotamine, diphenadione, dofetilide, dosulepin, doxepin, ergotamine, esketamine, ethinyl estradiol, ethosuximide, ethyl biscoumacetate, everolimus, fentanyl, fluindione, fosphenytoin, imipramine, levothyroxine, lofepramine, melitracen, meperidine, mephenytoin, mycophenolic acid, nortriptyline, paclitaxel, phenobarbital, phenprocoumon, phenytoin, pimozone, propofol, quinidine, sirolimus, tacrolimus, temsirolimus, theophylline, thiopental, tianeptine, trimipramine, valproic acid, warfarin
